ABSTRACT

Water is important for drinking, agriculture and industrial purposes. Water quality plays vital role in its utilization for different purposes. Water quality for drinking purpose should be as per BIS drinking water standards (IS 10500:2012). Barwala town in Panchkula district, Haryana, India has been selected in the present study for groundwater quality assessment for drinking purpose. In the study area six groundwater samples were collected in the month of June 2019 in plastic 250 ml bottles. Geo-coordinates of the sample locations noted with mobile GPS. Groundwater samples were analysed using Field Water Testing Kit prepared by Tamilnadu Water Supply and Drainage Board (TWAD) Chennai for ten chemical parameters-pH, hardness, chloride, fluoride, iron, ammonia, nitrite, nitrate, phosphate and residual chlorine. In the study area pH ranges from 7 to 8, hardness ranges from 150 mg/l to 400 mg/l, chloride ranges from 100 mg/l to 150 mg/l, fluoride ranges from 0.5 mg/l to 2 mg/l, iron ranges from 0 mg/l to 5.0 mg/l, ammonia ranges from 0.5 mg/l to 1.0 mg/l and residual chlorine ranges from 0 mg/l to 0.5 mg/l. In the study area groundwater quality is non-potable in five groundwater samples and potable in one groundwater sample. The study is highly useful for monitoring of groundwater quality for drinking purpose in the study area.

Keywords: Groundwater, quality, drinking, Barwala, Panchkula, Haryana.

INTRODUCTION

STUDY AREA

The study area Barwala Town and its surroundings covers 7921850.61 m² area and lies between the latitude 30°34'33.72” N- 30°32'25.01” N and longitude 76°55'37.74”E-76°57'22.05” E (Fig1). Barwala is a sub-tehsil in the Panchkula District of Haryana State. Barwala is located 20 Km towards south from Panchkula the district.
headquarters. The total geographical area of the town is 439 hectares and population 8,307 and about 1,569 houses. Barwala as a block consists of 35 gram panchayats and 10 block sameeties.

**OBJECTIVE**
The main objective of the study was to assess groundwater quality for drinking purpose in the study area.

**MATERIALS USED AND METHODOLOGY**
Six groundwater samples were collected during field visit in the month of June 2019 in plastic 250 ml bottles (Table 1). Geo-coordinates of groundwater sample locations were noted using mobile GPS. Chemical analysis of groundwater samples were done using Tamilnadu WaterSupply and Drainage Board (TWAD), Chennai prepared Field Water Testing Kit for ten chemical parameters-pH, hardness, chloride, fluoride, iron, ammonia, nitrite, nitrate, phosphate and residual chlorine(Table2). The groundwater samples analysis results have been categorized as desirable, permissible and non-potable on the basis of BIS Drinking Water Standards (IS 10500:2012)(Table3).

RESULTS AND DISCUSSION

I. pH
In the study area pH varies from 7 to 8. pH is desirable in all the six groundwatersamples-Shiv Colony-S1, Barwala (8.0), Near Bhareli Road, Barwala (7.0), Shiv Colony-S2, Barwala (7.5), Power House Colony-S1, Batawar, Near Bhagwanpur Road, Batawar (7.5) and Power House Colony-S2, Batawar (7.0) (Fig.2).

Fig. 2: pH in groundwater samples.

ii. Hardness
In the study area, hardness ranges from 150 mg/l to 400 mg/l. Hardness is desirable in groundwater sample at Power House Colony-S1, Batawar (150 mg/l) and permissible in groundwater samples at Shiv Colony-S1, Barwala (250 mg/l), Near Bhareli Road, Barwala (400 mg/l), Shiv Colony-S2, Barwala (400 mg/l), Near Primary Health Centre, Barwala (360 mg/l).

Bhagwanpur Road, Batawar (310 mg/l), Power House Colony-S2, Batawar (300 mg/l) (Fig.3).

Fig. 3: Hardness in groundwater samples.

iii. Chloride
In the study area, chloride ranges from 100 mg/l to 250 mg/l. Chloride is desirable in all the six groundwater samples - Shiv Colony-S1, Barwala (150 mg/l), Near Bhareli Road, Barwala (100 mg/l), Shiv Colony-2, Barwala (150 mg/l), Near Bhagwanpur Road, Batawar (150 mg/l), Power House Colony-S2, Batawar (100 mg/l), Power House Colony-S1, Batawar (150 mg/l) (Fig.4).

Fig. 4: Chloride in groundwater samples.
iv. Fluoride
In the study area, fluoride ranges from 0.5 mg/l to 1 mg/l. Fluoride is desirable in all the six groundwater samples at Shiv Colony-S1, Barwala (0.5 mg/l), Near Bhareli Road, Barwala (1.0 mg/l), Shiv Colony-S2, Barwala (1.0 mg/l), Power House Colony-S1, Batawar (1.0 mg/l), Near Bhagwanpur Road, Batawar (1.0 mg/l), Power House Colony-S2, Batawar (0.5 mg/l) (Fig.5).

vi. Ammonia
In the study area, ammonia ranges from 0.5 mg/l to 5.0 mg/l. Ammonia is desirable in groundwater samples at Power House Colony-S1, Batawar (0.3 mg/l), Near Bhagwanpur Road, Batawar (0 mg/l), Power House Colony-S2, Batawar (0.3 mg/l) and non-potable in groundwater samples at Shiv Colony-S1, Barwala (1.0 mg/l), Near Bhareli Road, Barwala (2.0 mg/l), Shiv Colony-S2, Barwala (5.0 mg/l) (Fig.6).

vii. Nitrite
In the study area, nitrite ranges from 0.2 mg/l to 1 mg/l. Nitrite is desirable in all the six groundwater samples - Shiv Colony-S1, Barwala (0.5 mg/l), Near Bhareli Road, Barwala (0.2 mg/l), Shiv Colony-S2, Barwala (0.2 mg/l), Power House Colony-S1, Batawar (1.0 mg/l), Near Bhagwanpur Road, Batawar (0.2 mg/l) and Power House Colony-S2, Batawar (0.5 mg/l) (Fig.8).

viii. Nitrate
In the study area, nitrate ranges from 20 mg/l to 150 mg/l. Nitrate is desirable in groundwater samples at Shiv Colony-S2, Barwala Town (45 mg/l), Near Bhagwanpur Road, Batawar (45 mg/l) and non-portable in groundwater samples at Shiv Colony-S1, Barwala (100 mg/l), Near Bhareli Road, Barwala (150 mg/l), Power House Colony-S1, Batawar (100 mg/l) and Power House Colony-S2, Batawar (100 mg/l) (Fig.9).
ix. Phosphate
In the study area, phosphate ranges from 0.5 mg/l to 1.0 mg/l. Phosphate is desirable in all the six groundwater samples—Shiv Colony-S1, Barwala (1.0 mg/l), Near Bhaireli Road, Barwala (0.5 mg/l), Shiv Colony-S2, Barwala (0.5 mg/l), Power House Colony-S1, Batawar (0.5 mg/l), Near Bhagwanpur Road, Batawar (1.0 mg/l), Power House Colony-S2, Batawar (1.0 mg/l) (Fig. 10).

\[ \text{Fig. 10: Phosphate in groundwater samples.} \]

x. Residual Chlorine
In the study area, residual chlorine ranges from 0 mg/l to 0.5 mg/l. Residual Chlorine is desirable in five groundwater samples—Shiv Colony-S1, Barwala (0.2 mg/l), Shiv Colony-S2, Barwala (0.2 mg/l), Power House Colony-S1, Batawar (0.2 mg/l), Near Bhagwanpur Road, Batawar (0 mg/l), Power House Colony-S2, Batawar (0.2 mg/l) and permissible in Near Bhaireli Road, Barwala (0.5 mg/l) groundwater sample (Fig. 11).

\[ \text{Fig. 11: Residual Chlorine in groundwater Samples.} \]

GROUNDWATER QUALITY AT SAMPLE SITES
I. Shiv Colony-S1, Barwala
In groundwater sample at Shiv Colony-S1, Barwala pH (desirable), hardness (permissible), chloride (desirable), fluoride (desirable), iron (non-potable), ammonia (non-potable), nitrite (desirable), nitrate (non-potable), phosphate (desirable) and residual chlorine (desirable) (Fig. 14). Overall the groundwater is non-potable due to high iron, ammonia and nitrate.

\[ \text{Fig. 12: Groundwater quality at Shiv Colony-S1, Barwala.} \]

ii. Shiv Colony-S2, Barwala
In groundwater sample at Shiv Colony-S2, Barwala

\[ \text{Fig. 13: Groundwater quality at Shiv Colony-S2, Barwala.} \]

iv. Power House Colony-S1, Batawar
In groundwater sample at Power House Colony-S1, Batawar pH (desirable), hardness (desirable), chloride (desirable), fluoride (desirable), iron (desirable), ammonia (non-potable), nitrite (desirable), nitrate (non-potable), phosphate (desirable) and residual
chlorine (desirable) (Fig.15). Overall the groundwater is non-potable due to high ammonia and nitrate.

v. Power House Colony-S2, Batawar
In groundwater sample at Power House Colony-S2, Batawar pH (desirable), hardness (permissible), chloride (desirable), fluoride (desirable), iron (desirable), ammonia (non-potable), nitrite (desirable), nitrate (non-potable), phosphate (desirable) and residual chlorine (desirable) (Fig.16). Overall the groundwater is non-potable due to high ammonia and nitrate.

vi. Near Bhagwanpur Road, Batawar
In groundwater sample at Near Bhagwanpur Road, Batawar pH (desirable), hardness (permissible), chloride (desirable), fluoride (desirable), iron (desirable), ammonia (desirable), nitrite (desirable), nitrate (desirable), phosphate (desirable) and residual chlorine (desirable) (Fig.17). Overall the groundwater is drinkable because all the analysed chemical parameters are under potable category of BIS drinking water standards (IS 10500:2012).

CONCLUSIONS
In the study area pH ranges from 7 to 8 and desirable for drinking purpose in all the six groundwater samples. Hardness ranges from 150 mg/l to 400 mg/l and desirable in one groundwater sample and permissible in groundwater samples at Shiv Colony-S1, Barwala (250 mg/l), Near Bhareli Road, Barwala (400 mg/l), Shiv Colony-S2, Barwala (400 mg/l), Near Primary Health Centre, Barwala (360 mg/l), Near Bhagwanpur Road, Batawar (310 mg/l), Power House Colony-S2, Batawar (300 mg/l). Chloride ranges from 100 mg/l to 150 mg/l and desirable in all the six groundwater samples. Fluoride ranges from 0.5 mg/l to 2 mg/l and desirable in all the six groundwater samples. Iron ranges from 0 mg/l to 5.0 mg/l and desirable in three groundwater samples and non-potable in groundwater samples at Shiv Colony-S1, Barwala (1.0 mg/l), Near Bhareli Road, Barwala (2.0 mg/l), Shiv Colony-S2, Barwala (5.0 mg/l), Near Primary Health Centre, Barwala (3.0 mg/l). Ammonia ranges from 0.5 mg/l to 5.0 mg/l and desirable in two groundwater samples and non-potable in groundwater samples at Shiv Colony-S1, Barwala (1.0 mg/l), Near Bhareli Road, Barwala (2.0 mg/l), Shiv Colony-S2, Barwala (5.0 mg/l), Near Primary Health Centre, Barwala (3.0 mg/l).
samples at Shiv Colony-S1, Barwala (2.0 mg/l), Near Bhareli Road, Barwala (5.0 mg/l), Power House Colony-S1, Batawar (5.0 mg/l), Power House Colony-S2, Batawar (5.0 mg/l). Nitrite ranges from 0.2 mg/l to 1 mg/l and desirable in all the six groundwater samples. Nitrate ranges from 45 mg/l to 150 mg/l and desirable in two groundwater samples and non-potable in groundwater samples at Shiv Colony-S1, Barwala (100 mg/l), Near Bhareli Road, Barwala (150 mg/l), Power House Colony-S1, Batawar (100 mg/l) and Power House Colony-S2, Batawar (100 mg/l). Phosphate ranges from 0.5 mg/l to 1.0 mg/l and desirable in all the six groundwater samples. Residual chlorine ranges from 0 mg/l to 0.5 mg/l and desirable in five groundwater samples and permissible in Near Bhareli Road, Barwala (0.5 mg/l) groundwater sample. Shiv Colony-S1, Barwala groundwater is non-potable due to high iron, ammonia and nitrate, Shiv Colony-S2, Barwala groundwater is non-potable due to high iron in the groundwater, Near Bhareli Road, Barwala groundwater is non-potable due to high iron, ammonia and nitrate, Power House Colony-S1, Batawar groundwater is non-potable due to high ammonia and nitrate, Power House Colony-S2, Batawar groundwater is non-potable due to high ammonia and nitrate, Near Bhagwanpur Road, Batawar groundwater is drinkable because all the analysed chemical parameters are under potable category.
